

Debugging Process:

In VS Code, access each file paying attention to the status symbol to the right where a number appeared displaying the amount of script errors within the file. Go to the Problems tab within terminal to pinpoint the errored location. Once located correct the error either 1st glance recognition or running into an AI LLM i.e. chat gpt to point out the error and offer possible corrections. From there make the corrections.

From there in VS read the # comments for errors such as syntax, logic & etc. Within the files here are the terraform problems corrected:

Index4.html:

Line 32: removed second “=”

Line 33: “children”

Line 42 & 43: traded max & min within the variable statements

Line 82: traded max & min within the string statements

Line 91: correction placing “} else”

Python_app4:

Line 16: changed “int” to “float” for decimals to be allotted

Line 31: replace “0” with “len(numbers)”

Line 85: added colon “else:”

Line 97: “def flawed_function(x, y):”

Script4.js:

Line 26 & 27: Switched -Infinity & Infinity to initialize -Infinity

Line 58: added “=” to ==

Line 70: added “=== 0” to use comparison operator

Line 99: changed “cnt++” to “cnt—”

Line 109: added closing brace in front of “} else” to stop decrement loop

Script4.sh

Line 24: changed from “0” to “line_count”

Line 39: changed to “\$w”

Line 42: changed to include “” "\$longest"

Line 65: changed to counter – 1 from counter + 1

Line 74: added “; then” to complete the if then statement
